This edited review book on Godunov methods contains 97 articles, all of which were presented at the international conference on Godunov Methods: Theory and Applications, held at Oxford in October 1999, to commemorate the 70th birthday of the Russian mathematician Sergei K. Godunov. The meeting enjoyed the participation of 140 scientists from 20 countries; one of the participants commented: everyone is here, meaning that virtually everybody who had made a significant contribution to the general area of numerical methods for hyperbolic conservation laws, along the lines first proposed by Godunov in the fifties, was present at the meeting. Sadly, there were important absentees, who due to personal circumstance could not attend this very exciting gathering. The central theme of the meeting, and of this book, was numerical methods for hyperbolic conservation laws following Godunov's key ideas contained in his celebrated paper of 1959. But Godunov's contributions to science are not restricted to Godunov's method.

"Review from Internationale Mathematische Nachrichten Nr. 192

By A Customer

"Godunov Methods: Theory and Applications" edited by Prof. Toro is an excellent book containing almost one hundred refereed articles devoted to the theory and applications of Godunov methods...the many articles contained in this book show how his method can be successfully applied to solve a large class of application problems...This book provides an exhaustive overview of past and present research work on Godunov methods and related techniques. It is already a classical reference for all those working on numerical methods for hyperbolic problems. Every mathematics library should have copies of this book."
