Despite the many advances of contemporary dental research in biomaterials and tissue regeneration, no dental material can perfectly correspond to natural tooth. The authors of this dynamic atlas posit that it is the mastery of layering technique and not the material itself that is most important in recreating natural-looking restorations. This reference book uses over a thousand images to explore the stratification of natural tooth and demonstrate solutions for how to arrange layers of composite resin to recreate the color, opacity, shape, and surface abnormalities of natural tooth. The authors provide step-by-step instruction in basic layering techniques as well as in advanced applications of dental characteristics, which are possible with a wide range of esthetic dental materials. In addition, each chapter is prefaced with insights from luminaries in esthetic dentistry, including Luiz Narciso Baratieri, Galip Gürel, Pascal Magne, Francesco Mangani, Ricardo Mitrani, and Angelo Putignano, among others. Optimal stratification techniques not only create natural-looking beauty in restorations but also imitate the innate bioarchitecture of teeth, which is the foundation of functional and esthetic results.

Amazing book! Detailed description of anterior teeth layering techniques

By Fiona Lo

Amazing book!

Detailed description of anterior teeth layering techniques.

Recreation of posterior occlusal morphology also demonstrated towards the end of the book.

This is exactly what I was looking for. Would recommend it to anyone who is interested in aesthetic dentistry.

Had three direct veneer cases w/ composite over mx anteriors ever since reading this book and my patients were all very impressed with the outcome. Definitely a book where you can read at night and apply what you learnt the next day.
